

The "Education Vaccine" against HIV

2000. 11 p.

Authors:

Vandemoortele, Jan
Delamonica, Enrique

Organizations:

unicef

Periodical title:

Current Issues in Comparative Education - Volume 3, Number 1

Description:

This article focuses on the correlation between HIV infection and the level of education, the latter being a good proxy indicator for a person's overall socio-economic status. If the hypothesis holds true that, beyond the initial stage of the AIDS pandemic, education reduces the risk of HIV infection, then the new HIV infections will gradually become concentrated among illiterate and poor people as the epidemic spreads among the population.
