### Description:

Este artigo problematiza a visão contemporânea dominante sobre a sexualidade, seus proclamados riscos e formas desejadas, contrapondo a ela discursos contra-hegemônicos que surgiram desde a emergência da epidemia de HIV-aids, mas que foram silenciados ou ignorados em prol dos consensos que atendiam às demandas da saúde pública. Utilizamos discursos dissidentes sobre a doença para analisar dados etnográficos sobre travestis que se prostituem, seus clientes e também homens que se relacionam em segredo com outros homens. Ressaltamos como a saúde pública, por meio da forma preconceituosa que lidou com a epidemia inicialmente, lançou as bases do dispositivo da aids que se mantém até nossos dias. Este dispositivo funciona por meio de políticas públicas de prevenção ao HIV e resulta em controle e normalização das relações afetivas e sexuais segundo padrões heteronormativos.
