Periodical title:

Journal of Adolescent Health 39 (2006) 720–728

Description:

Purpose: To assess the feasibility and effectiveness of sex education conducted through the Internet. Conclusions: Providing sex education to students in Shanghai through the Internet was found feasible and effective. The Internet-based sex education program increased students' reproductive health knowledge effectively and changed their attitudes toward sex-related issues in terms of being less liberal toward sex and more favorable to providing services to unmarried young people. The Internet thus offers an important and hitherto untapped potential for providing sex education to students and young people in China.
